EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Carlton Hoel, Reg. No. 29,934, on 9/29/07.

The application has been amended as follows:

Claim 1 (currently amended) A method of resampling a data sequence to resize a digital image, comprising:

(a) providing filter coefficients according to an input resampling ratio U/D for resizing a digital image where U and D are positive integers, said coefficients grouped into U sub-filters according to phase and corresponding to a data access block;

(b) for each of a plurality of architecture kernels:

(i) provide a step per group of H of said sub-filters from a first set of integers about $H \cdot D/U$ where H is the height of said architecture kernel;

(ii) for each of said steps from said first set, find a length for said sub-filters according to an access coverage chart for said data access block;

(c) using the architecture kernel and the step corresponding to a minimum of said lengths of step (b)(ii) to filter an input digital image data sequence;

(d) outputting the filtered digital image to a storage medium or a display.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

In regard to claims 1-4, the prior art does not disclose a method of resampling a data sequence or a digital camera zoom with the combination of limitations specified in the claimed invention, specifically the limitations of:

(b) parallel processing circuitry coupled to said zoom selection input and operable to resample an image by (1) providing filter coefficients according to a resampling ratio dependent upon an input zoom selection, said coefficients grouped into sub-filters according to filter phase and corresponding to a data access block; (2) for each of a plurality of architecture kernels of said parallel processing circuitry (i) provide a step per group of said sub-filters from a first set of integers corresponding to the height of said architecture kernel and said resampling ratio, (ii) for each of said steps from said first set, find a length for said sub-filters according to an access coverage chart for said data access block; and (3) using the architecture kernel and the step corresponding to a minimum of said lengths of step (b)(ii) to filter said image, as stated in claims 1 and 4.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gevell Selby whose telephone number is 571-272-7369. The examiner can normally be reached on 8:00 A.M. - 5:30 PM (every other Friday off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lin Ye can be reached on 571-272-7372. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
